

1. Project & Contribution Overview

AcadPredict is an academic project collaboration and risk-prediction platform designed to support students, faculty, and coordinators across the project lifecycle. Member 1 is responsible for the complete React.js frontend and the user-facing workflows.

Main Frontend Responsibility

- Develop the complete React.js frontend.
- Build the student project-management interface.
- Provide project, team, task, milestone, document, risk, and notification pages.
- Implement client-side navigation and reusable UI components.
- Prepare the frontend for REST API integration.

Technologies

Technology	Purpose
React.js	Frontend application and reusable components
JavaScript	Application logic and interactions
HTML5 / CSS3	Structure, styling and responsive UI
Client-side routing	Navigation between portal modules
REST API integration	Communication with backend services

2. Frontend Results

The supplied screenshots demonstrate a connected student-facing portal with a consistent sidebar navigation and common visual language across the major modules.

Module	Result Demonstrated
Login	Academic portal login interface
Dashboard	Project, task, milestone and risk summary
My Projects	Project listing, status, guide, team and progress
Proposal	Proposal form and review status workflow
My Team	Team members, roles, skills and status
Tasks	Sprint tasks, priorities, progress, due dates and filters
Milestones	Academic phases, deliverables, dates and completion
Documents	Upload/list/download/delete document interface
Risk Prediction	Risk score, diagnostics, rationale and actions
Notifications	Milestone, guide, system and task notifications

Demonstrated Application State

Metric	Displayed Value
Active Projects	1
Dashboard Pending Tasks	4
Upcoming Milestones	2
Risk Level	Medium
Risk Score	52 / 100
Project Completion	68%
Academic Milestone Progress	48%
Team Status	Confirmed (4/4 Members)
Proposal Status	Submitted — Under Guide Review

Important: the Risk Prediction screenshot explicitly identifies AcadPredict-Ensemble-v2.3 (Mock Engine). The 52/100 value is therefore documented as an application-displayed result, not as independently validated ML performance.

3. Demonstrated Frontend Workflow

Step	Frontend Module	Purpose
1	Login	Authenticate and enter the academic portal
2	Dashboard	View project status, tasks, milestones and risk
3	My Projects	Manage and inspect project information
4	Proposal	Submit and track the project proposal
5	My Team	View and manage team collaboration
6	Tasks	Track assigned sprint work and completion
7	Milestones	Monitor academic submission checkpoints
8	Documents	Manage project deliverables
9	Risk Prediction	View schedule-delay risk analytics
10	Notifications	Track important project updates

1. GENERAL INFORMATION

Project Title *

AcadPredict: Academic Project Collaboration & Risk Prediction Platform

Technology / Domain *

Machine Learning & Full-Stack Web Development

Faculty Guide Selection *

Dr. K. S. Sharma (Associate Professor, CSE)

Brief Summary / Abstract

AcadPredict serves as a centralized institutional hub for managing student projects from proposal submission to final viva defense.

2. TECHNICAL SCOPE & DELIVERABLES

Problem Statement *

In academic engineering capstone projects, student teams frequently experience delayed milestones, lack of unified mentor feedback tracking, and unpredicted schedule slippage. Coordinators lack real-time predictive analytics to intervene before semester deadlines are breached.

Specific Objectives *

Current Status: Submitted - Under Guide Review

Proposal Status

1. Student Draft

Completed by Team Lead

2. Guide Review

Awaiting approval from Dr. Sharma

3. Coordinator Approval

Department Project Committee

Important Notice:

Final date for guide proposal endorsement is Nov 10, 2026. Re-submissions are allowed up to 2 iterations.

Submission Guidelines

Titles must be clear and specific to the engineering problem.

At least 3 measurable objectives are mandatory.

Both hardware and software specifications must be feasible

5. Final Frontend Outcome

The Member 1 frontend establishes the primary user interface for AcadPredict and demonstrates the core student project-management workflow from authentication through project tracking, team collaboration, task management, milestones, document management, risk visualization, and notifications.

Contribution Summary

- Complete React.js frontend structure and page implementation
- Student dashboard and project-management interfaces
- Proposal and team-management interfaces
- Task and milestone tracking interfaces
- Document management interface
- Risk prediction visualization
- Notification interface
- Client-side navigation
- REST API integration preparation

Recommended Next Validation

- Connect every UI action to the final REST APIs.
- Validate authentication and authorization for Student, Faculty and Coordinator roles.
- Validate Faculty and Coordinator dashboards end-to-end.
- Replace mock risk data with the final ML prediction service when available.
- Perform final responsive and end-to-end testing.

Report generated from the screenshots and project responsibilities supplied for Member 1.
